

# HYBRID ECOCLIMA ELITE WITH ELECTRIC HEAT PUMP

## EXAMPLE PLANT

The evolution of the standard **Hybrid Ecoclima COMFORT (HY-CE)** central unit, is represented by the **Hybrid Ecoclima ELITE (HY-EE)**, model, the special "all-air version", where design choices have made it

possible to **maximise efficiency in the recovery of green thermal energy from the outside air**, even at very low temperatures, thanks to dedicated components consisting of solenoid valves, plate exchangers and temperature detectors, intelligently managed by the **Hybrid Software Manager (HSM)**.

**FACTORY MADE SMART HSM MANAGEMENT**
